PROJECTS

Smart Ambulance and Hospital Assistance System | *React.js, Spring Boot, MongoDB*

- Built an emergency response platform for real-time ambulance requests with live tracking and route navigation via OpenRouteService API.
- Designed separate modules for patients, drivers, and hospitals with real-time status updates and nearby hospital suggestions.

Humanexa - Blood and Helper Donation Platform | *MERN Stack*

- Built a platform connecting blood donors and volunteers with people seeking emergency assistance, with search by blood group and location.
- Implemented secure authentication and responsive dashboards for managing donation requests.

AI-Based Lung Disease Detection System | *Python, TensorFlow, CNN*

- Developed a desktop app using a trained CNN model to classify chest X-rays into multiple lung disease categories.
- Generated PDF diagnostic reports with patient history management and report-sharing features.
